

PRESS INFO – CASE STUDY “RTVS – OB-Van produciton”**STRYME boosts RTVS OB-Van productions with Mobile Video Content Transfer**

Radio Television Slovakia (RTVS), Slovakia’s public broadcaster, chose STRYME’s flagship product – the ultra-slim 2U 12 HD channels GENESIX VideoServer V8 – plus the new mobile storage solution GENESIX 2GO to speed up and simplify OB-Van productions. Eight input and four output channels add flexibility to Multi-Cam Ingest. The user-friendly AutoNaming function makes post-production work even easier.

RTVS’s live HD productions require maximum flexibility when it comes to on-location multi-camera setups and OB-Van systems. Speed and simplicity, efficiency and flexibility, superior usability and reliability are top priorities for all workflows. STRYME’s eighth generation ultra-slim 2U GENESIX VideoServer with 12 HD channels (8 ingest, 4 output) provides it all:

Cost-effective – Compact – High-tech: ideal for the confined spaces in OB-Vans and ideal for managing workflows with simultaneous Multi-Cam Ingest. Synchronized recordings from several camera settings are copied in parallel to

an external mobile storage, using the time-saving Transfer While Capture function. Edit While Capture keeps up the suspense of live moments, delivering the right clips in an instant. STRYME’s AutoNaming function automatically names and categorizes clips and camera settings in logically structured directories and sub-directories. Cutters with individual user profiles can easily retrieve and reuse the clips they need for editing, re-sequencing, post-production highlight cuts, etc.

GENESIX 2GO is the latest addition to STRYME's innovative range of solutions. Weighing less than 3kg, GENESIX 2GO is a powerful portable high-tech storage/backup solution – perfect for mobile productions. Protected by a hard case, it is sturdy, easy to use and guarantees fast data transportation right after recording. Its high bandwidth enables rapid video content transfers in real time for up to 16 channels (XDCAM HD 422). With GENESIX 2GO, content producers work much faster and more efficiently – without compromising quality.

GENESIX 2GO and the GENESIX VideoServer are a perfect match because full ingest

functionality is already onboard, including the Transfer Manager & MAM. All data (clips, video footage, etc.) can be transferred and stored simultaneously on the ultra-slim 2U GENESIX

VideoServer and on up to two portable GENESIX 2GO storage devices, each with a capacity of up to 6TB. A cable connects each backup unit with the video server. After recording, the units are simply unplugged, and the data stored can immediately be passed on to post production. Data transfer has never been that easy!

“We wanted to come up with a truly mobile solution. GENESIX 2GO is a small, yet powerful lightweight with a huge storage capacity. Coupled with our ultra-slim 2U 12 HD Channels GENESIX VideoServer and Multi-Cam Ingest it is just perfect OB-Van productions, outdoor or freelance work. What's more, we made sure that like every other solution made by STRYME, it goes easy on the budget,” STRYME CEO Goce Zdravkovski proudly states. He gratefully adds: “Once again, we were very happy to work in tandem with ELVIA-PRO. Thanks to this mutually beneficial collaboration Slovakia's public broadcaster now operates a sophisticated, all-in-one failsafe solution that ensures uninterrupted live broadcasting when their studios are on the move.”
